RISK PROFILE OF THE SCHEME(S)

- Mutual Fund units involve investment risks including the possible loss of principal. Please read the Scheme Information Document carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:
- The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the new fund offer itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the amount collected during the NFO period. Consequently, such exposure over 25% limit will lead to refund within 5 Business days from the date of closure of NFO.
- In addition to the factors that affect the values of securities, the NAV of Units of the Scheme will fluctuate with the movement in the broader fixed income, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the fixed income markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges.
- Further the investments made by the Scheme will also be affected by interest rate risk, spread risk, credit risk or default risk, liquidity risk, reinvestment risk, settlement risk, market risk, risk associated with investment in derivatives, foreign securities and securitised debt.

RISKS ASSOCIATED WITH TRADING ON STOCK EXCHANGE(S)

- The transactions in the Units of a Scheme can be undertaken only once the Units are listed on the Stock Exchange(s) and there could be a time gap between the allotment and listing of Units on the Stock Exchange(s). This could lead to inability on the part of investors to trade in the Units during the aforesaid period.
- Although Units of the Scheme as mentioned in the Scheme Information Document will be listed on the Stock Exchange(s), there can be no assurance that an active secondary market will develop or be maintained.
- The Units of a Scheme may trade above or below their NAV. The NAV of a Scheme will fluctuate with changes in the market value of the Scheme's holdings. The trading prices of Units of a Scheme will fluctuate in accordance with changes in their NAV as well as demand and supply of the Units of a Scheme in the market.
- Trading in Units of a Scheme on the Stock Exchange(s) may be halted because of market conditions or for reasons that in view of exchange authorities or SEBI, trading in Units of a Scheme is not advisable. In addition, trading in Units of a Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of a Scheme will remain unchanged.
- In respect of Units issued in demat form through Depositories, the records of the depository shall be final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Fund on the Maturity Date will depend upon the confirmations to be received from Depository(ies) on which the Fund has no control.
- As the Units allotted under a Scheme will be listed on the Stock Exchange(s), the Fund shall not provide for redemption/repurchase of Units prior to Maturity Date of a Scheme.

RISKS ASSOCIATED WITH CLOSED-ENDED SCHEME

Market Risk: As with all debt securities, changes in interest rates may affect the Scheme's NAV as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than the short-term securities.

Volatility Risk: Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby causing fluctuations in the Scheme's NAV.

Liquidity Risk: FMPs are listed on exchanges. However, there can be no assurance that an active secondary market will develop, hence, these might not be easily tradable. Trading in the units may also be impacted due to market conditions / circuit filter rules / extraordinary events leading to Exchange / SEBI authorities halting the trading in general or in the units of the scheme. The bid-ask spread could be high in the event of low trading volumes. In case the investor has to sell off the FMP for whatsoever reason, he/she may have to sell it at a discount i.e. at lower value as compared to the NAV.

While all endeavour would be made to ensure compliance with the requirement of the Exchange necessary to maintain the listing of the Units of the respective plan(s), there can be no assurance that these will continue to be met or will remain unchanged.

As the Units will be listed on the Exchange(s), the Fund shall not provide redemption / repurchase facility for Units prior to maturity / final redemption date of the respective plan.

Credit Risk : While credit risk is associated with all debt investments / debt funds, in the case of FMPs, such risk, if materialized, could have a higher impact on the NAV as the resolution may have to be done at distress.

Reinvestment Risk: Investments by FMPs are restricted to securities maturing on or before the maturity date of the FMP. Investment of the fund that are repaid or sold before the fund maturity date would need to be reinvested in shorter tenor securities / CBLO with maturity before the FMP date. Yield on such reinvestments may be lower given shorter duration of such investments with consequential impact on overall yield / return of the fund.

RISK ASSOCIATED WITH INVESTING IN DERIVATIVES

The Scheme will invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

Further, an advertisement disclosing the hosting of the aforesaid results on the website shall be published in one national English daily newspaper circulating in the whole of India and in a Marathi daily.

INVESTMENT STRATEGY

The investment strategy of the Scheme will be to invest the assets of the Scheme in various debt (including government securities) and money market securities maturing on or before the maturity of the Scheme.

The actual percentage of investment in various fixed income securities will be decided after considering the economic environment (including interest rates and inflation), the performance of the corporate sector and general liquidity, prevailing political conditions and other considerations in the economy and markets. Also the Fund Manager(s) will generally be guided by, but not restrained by, the ratings announced by various rating agencies on the debt instruments available in the market.

All investments made by the Scheme will be made in accordance with SEBI (Mutual Funds) Regulations, 1996, as amended from time to time.

- The overall portfolio structuring would aim at controlling risk at moderate level. Issuer specific risk will be minimised by investing only in those companies that have been thoroughly researched in-house. Risk will also be managed through broad diversification of the portfolios within the framework of the Schemes' investment objective and policies.
- The AMC will follow a structured investment process in order to identify the best securities for investment and has developed an internal research framework for consistently examining all securities.

Credit Evaluation Policy

Investors are requested to note that the following Credit Evaluation Policy shall be followed by the AMC:

The AMC has a dedicated credit analysis function for conducting the due-diligence and thorough analysis of each company.

Investments in fixed income instruments are made on the basis of an internal approved list of companies/issuers. The list is usually reviewed on a half yearly basis with respect to their financial health. The Companies/Issuers which already form part of the portfolio are reviewed on a regular basis as their financial results are published. The ratings of companies/issuers in this internal approved list are under a continuous watch by the credit analysis function. Any upgrades or downgrades are immediately informed to the Investment Team and action (if any) is taken immediately.

For inclusion of a new company/issuer in an internal approved list, a detailed process is followed by the AMC. The credit analysis function prepares a detailed report on the company/issuer taking into account both qualitative and quantitative parameters. The report is prepared after carefully studying the company financial data, its track record, its sponsor/parent in terms of their financials, any defaults to its creditors etc. The Analyst/Fund Manager may also meet the management of the company/issuer. In addition to this, the sector in which the company/issuer operates is also studied.

The AMC would ensure that appropriate risk mitigating measures are in place throughout the tenure of portfolio of the Scheme i.e., right from the beginning of the portfolio construction phase. It involves all tenets of independent credit risk analysis, adequate diversification of the portfolio and maturity of securities being in line with the maturity of the portfolio. In order to ensure adequate independent risk management, the AMC shall endeavour independence through credit risk analysis of all the intended credits.

Investments in Securitised Debt/Structured Instruments

The various asset classes which are generally available for securitisation in India are:

- Commercial Vehicles
- Construction equipments
- Auto and two wheeler pools
- Mortgage pools
- Personal loan, credit cards and other retail loans
- Micro finance loans
- Corporate loans/receivables
- Project SPV's receivables

As and when new asset classes of securitised debt/structured instruments are introduced, the investments in such instruments will be evaluated on a case by case basis.

The dedicated credit research function which supports the Fund Manager will generally adopt a bottom - up approach while assessing the originator and will consider various factors for the purpose of identification of the securitised debt to which the Scheme could take exposure which will include profile of the issuer/originator, nature of asset class, analysis of underlying loan portfolio, seasoning of loans, geographical distribution of loans, coverage provided by credit-cum-liquidity enhancements, pre-payment risks (if any), assessment of credit risk associated with the underlying borrower and other associated risks. For Project SPV's receivables, in addition to the profile of issuer and its sponsor, credit function will also consider the track record of underlying project cash flows, project viability, receivables visibility under various scenarios, counter party risk and structure of the instrument in terms of available credit enhancements/guarantees/ring-fencing of cash flows.

Investments in securitised debt will be done in accordance with the overall investment objective and the risk profile of the Scheme and will primarily be for the purposes of achieving portfolio diversification and optimising returns. Securitisation enables end investors to obtain exposure to large number of smaller size retail loans, and also to SPV receivables, strengthened by robust instrument structure, which can help diversify idiosyncratic risk. Carefully created portfolio of good quality loans, combined with adequate credit enhancements can, from time to time, provide good risk-adjusted investment opportunities for the investing scheme. It must be noted that the securitised debt/structured instruments are relatively less liquid in the secondary market, since the Scheme does not provide exit option to unitholders the liquidity risk can be prudently managed. The various disclosures with respect to securitised debt made in the Scheme Information Document will help the investors to assess and understand the risks which the Scheme will be subject to as a result of investments in securitised debt.

The credit research function awards an internal rating for various issuers based on the independent research and by following L&T's internal credit process taking into account issuer's/originator's historical track record, prevailing rating and financial statements.

The issuer/originator will be evaluated based on various parameters including but not limited to -

- track record - In conjunction with the track record, other relevant factors which will be considered are level of credit enhancement, support from the parent and the ownership structure of the securitization vehicle. In case of project SPVs, track record of its lead sponsor will be considered.
- the willingness and ability to pay – For transactions with recourse to the originator, internal credit assessment of the originator would play a crucial role in determining the willingness and ability to pay. For transactions without recourse to the originator, credit enhancement facilities in the form of cash collateral, such as fixed deposits, bank guarantee etc. could be obtained as a risk mitigation measure. A detailed financial risk assessment of the issuer/originator will be carried out by identifying the financial risks specific to the issuer/originator including assessment of the issuer's financial statements.

Also the following critical evaluation parameters would be considered by the Fund Manager/the credit research function:

- High default track record/frequent alteration of redemption conditions/covenants
- High leverage ratios of the ultimate borrower (for single-sell downs) – both on a standalone basis as well on a consolidated level/group level
- Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
- Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
- Poor corporate governance

- Insufficient track record of servicing of the pool or the loan, as the case may be.

After the evaluation of the aforesaid parameters at the of the time of investment, the monitoring of investments in securitised debt is done on regular intervals by the credit function and in case of any major event, the assessment of the critical evaluation parameters is done again.

The underlying assets in securitised debt/structured instruments may assume different forms and the general types of receivables include auto finance, credit cards, home loans or corporate receivables, SPV receivables or any such receipts. Credit risks relating to such receivables depend upon various factors, including macro-economic factors of these industries and economies. Further, specific factors like the nature and adequacy of property mortgaged against these borrowings, the nature of loan agreement/mortgage deed in case of home loans, adequacy of documentation in case of auto finance and home loans, capacity of a borrower to meet his obligations on borrowings in case of credit cards macro-economic risks & counter party risks related to project receivables in terms of project SPVs and intentions of the borrower also influence the risks relating to asset borrowings underlying securitised debt/structured instrument. Additionally, the nature of the asset borrowings underlying the securitised debt/structured instrument also influences the underlying risk, for instance while residential mortgages tend to have lower default rates, repossession and recovery is easier in case of commercial vehicles. Credit rating agencies take into account a series of such factors and follow an elaborate system involving stipulation of margins, over-collateralisation and guarantees to provide a rating for securitised debt.

Risks associated with investments in securitised debt/structured instrument:

The underlying assets in securitised debt may assume different forms and the general types of receivables include auto finance, credit cards, home loans or any such receipts. Credit risks relating to such receivables depend upon various factors, including macroeconomic factors of these industries and economies. Further, specific factors like the nature and adequacy of property mortgaged against these borrowings, the nature of loan agreement/mortgage deed in case of home loans, adequacy of documentation in case of auto finance and home loans, capacity of a borrower to meet his obligations on borrowings in case of credit cards and intentions of the borrower also influence the risks relating to asset borrowings underlying securitised debt. Additionally, the nature of the asset borrowings underlying the securitised debt also influences the underlying risk, for instance while residential mortgages tend to have lower default rates, repossession and recovery is easier in case of commercial vehicles. Credit rating agencies take into account a series of such factors and follow an elaborate system involving stipulation of margins, over-collateralisation and guarantees to provide a rating for securitised debt.

In case of securitised debt, changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors but may have an impact on the reinvestment of the periodic cash flows that an investor receives on securitised papers.

- **Tenor risk:** While building the planned amortization schedule for a PTC, there can be a clause stating a minimum percentage of receivable by the issue to stick to the initial cash flows. If the receivables are less than the minimum stated receivables then the tenor of the PTC can get elongated or vice versa.
- **Risk due to prepayment:** In case of securitised debt, changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors but may have an impact on the re-investment of the periodic cash flows that an investor receives on securitised papers.

In the event of pre-payment of the underlying debt, investors may be exposed to changes in tenor and yield.

- **Liquidity Risk:** Presently, despite recent legal developments permitting the listing of securitised debt/ structured instrument, the secondary market for securitised debt in India is not very liquid. Even if a more liquid market develops in the future, secondary transactions in such instruments may be at a discount to initial issue price due to changes in the interest rate structure.
- **Limited Recourse, Delinquency and Credit Risk:** Certificates issued on investment in securitised debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan/ decline in project SPV's receivables can adversely affect the pay outs to the investors and thereby, adversely affect the NAV of the Scheme. While it is possible to repossess and sell the underlying asset, various factors can delay or prevent repossession and the price obtained on sale of such assets may be low. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of a Obligor to repay his obligation, the Servicer may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

- **Bankruptcy Risk:** If the originator of securitised debt instruments in which the Scheme invests is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', then the Scheme could experience losses or delays in the payments due. Normally, care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'.
- **Risk of Co-mingling:** Servicers in a securitization transaction normally deposit all payments received from the obligors into a collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account. In this interim period, collections from the loan agreements by the servicer may not be segregated from other funds of the servicer. If the Servicer fails to remit such funds due to investors, investors in the Scheme may be exposed to a potential loss.

RISK MITIGATION

Investments in securitised debt will be done based on the assessment of the originator and the securitised debt which is carried out by the credit research function based on the in-house research capabilities as well as the inputs from the independent credit rating agencies as well as the inputs from the independent credit rating agencies and by following L&T's internal credit process. In order to mitigate the risk at the issuer / originator level the credit function will consider various factors which will include-

- size and reach of the issuer / originator;
- collection process;
- the infrastructure and follow up mechanism;
- the quality of information disseminated by the issuer / originator; and
- the credit enhancement for different types of issuer / originator.
- track record of project SPV receivables, counter party risk & project risk.

The examples of securitized assets which may be considered for investment by the Scheme and the various parameters which will be considered include;

- A) Asset backed securities issued by banks or non-banking finance companies. Underlying assets may include receivables from loans against cars, commercial vehicles, construction equipment or unsecured loans such as personal loans, consumer durable loans, corporate receivables etc. The various factors which will be usually considered while making investments in such type of securities include profile of the issuer, analysis of underlying loan portfolio – nature of asset class, seasoning of loans, geographical distribution of loans and coverage provided by credit-cum-liquidity enhancements.
- B) Mortgage backed securities issued by banks or housing finance companies, where underlying assets are comprised of mortgages / home loan. The various factors which will be usually considered while making investments in such type of securities include issuer profile of the issuer, quality of underlying portfolio, seasoning of loans, coverage provided by credit-cum-liquidity enhancements and prepayment risks.
- C) Single loan securitization, where the underlying asset comprises of loans issued by a bank / non-banking finance company. The factor which will be usually considered while making investments in such type of securities include assessment of credit risk associated with the underlying borrower as well as the originator. The dedicated credit research function will adhere to the L&T's internal credit process and perform a detailed review of the underlying borrower prior to making investments.
- D) Any other instrument that are introduced in the market from time to time.

The Fund Manager will invest in securitised debt/ structured instrument which are rated investment grade and above by a credit rating agency recognised by SEBI.

While the risks mentioned above cannot be eliminated completely, they may be minimized by considering the diversification of the underlying assets and credit and liquidity enhancements. Further, investments in securitised debt/ structured instrument will be done in accordance with the investment restrictions specified under the Regulations / the Scheme Information Document which would help in mitigating certain risks. Currently, as per the Regulations, the Scheme cannot invest more than 10% of its net assets in debt instruments (irrespective of residual maturity) issued by a single issuer which are rated not below investment grade by a credit rating agency authorised to carry out such activity under the Act. Such investment limit may be extended to 12% of the net assets of the Scheme with the prior approval of the Board of Trustees and the Board of the AMC.

In addition, a detailed review and assessment of the ratings of the securitised debt will also be carried out which could include interactions with the issuer / originator and the rating agency.

The rating agency would normally take in to consideration the following factors while rating a securitised debt/ structured instrument:

- Credit risk at the asset / originator / portfolio / pool level
- Various market risks like interest rate risk, macro-economic risks
- Counterparty risk
- Legal risks
- assessment of risks related to business for example outlook for the economy, outlook for the industry and factors specific to the issuer / originator.

The framework which will generally be applied by the Fund Manager while evaluating the investment decision with respect to securitised debt will be as follows:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single loan Sell Downs	Others
Approximate Average maturity (in Months)	3 months to 120 months	3 months to 60 months	3 months to 60 months	3 months to 36 months	1month to 12 months	3 months to 12 months	1 month to 120 months	As and when new asset classes of securitised debt are introduced, the investments in such instruments will be evaluated on a case by case basis.
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	In excess of 3%	In excess of 5%	In excess of 5%	In excess of 5%	In excess of 10%	In excess of 10%	Case by case basis	
Average Loan to Value Ratio	95% or lower	90% or lower	90% or lower	90% or lower	Unsecured	Unsecured	Case by case basis	
Maximum single exposure range *	< 2.5%	< 1%	< 1%	< 1%	<0.5%	<0.5%	Not Applicable	
Average single exposure range %*	< 1%	< 0.5%	< 0.5%	< 0.5%	< 0.25%	< 0.25%	Not Applicable	

*denotes % of a single ticket / loan size to the overall assets in the securitised pool.

Note: The information illustrated in the table above is based on current scenario relating to securitised debt market and is subject to change depending upon the change in the related factors.

In addition, fund manager's investment decision would be in conformity of RBI's guidelines on securitized transactions as applicable for the originators / issuers of the securitized instruments.

In addition to the framework stated in the table above, in order to mitigate the risks associated with the underlying assets where the diversification is less, at the time of investment the credit function could consider various factors including but not limited to-

- Size of the loan - the size of each loan is generally analysed on a sample basis and an analysis of the static pool of the originator is undertaken to ensure that the same matches with the static pool characteristics. It also indicates whether there is high reliance on very small ticket size borrower which could result in delayed and expensive recoveries.
- Average original maturity of the pool of underlying assets - the analysis of average maturity of the pool is undertaken to evaluate whether the tenor of the loans are generally in line with the average loans in the respective industry and repayment capacity of the borrower.
- Loan to value ratio, average seasoning of the pool of underlying assets - these parameters would be evaluated based on the asset class as mentioned in the table above.
- Default rate distribution - the credit function generally ensures that all the contracts in the pool are current to ensure zero default rate distribution.
- Geographical distribution - the analysis of geographical distribution of the pool is undertaken to ensure prevention of concentration risk.
- Credit enhancement facility - credit enhancement facilities in the form of cash collateral, such as fixed deposits, bank guarantee etc. could be obtained as a risk mitigation measure.

- Liquid facility - these parameters will be evaluated based on the asset class as mentioned in the table above.
- Structure of the pool of underlying assets - The structure of the pool of underlying assets would be either single asset class or combination of various asset classes as mentioned in the table above. We could add new asset class depending upon the securitisation structure and changes in market acceptability of asset classes.

The minimum retention period of the debt by the originator prior to securitisation and the minimum retention percentage by originator of debts to be securitised shall be as specified in the RBI guidelines.

There is a dedicated credit research function which supports the Fund Manager in taking investments decisions.

Investments by the scheme in any security are done after detailed analysis by the credit research function and in accordance with the investment objectives and the asset allocation pattern of a scheme. All investments are made on an arm's length basis without consideration of any investments (existing / potential) in the schemes made by any party related / involved in the transaction. The robust credit process ensures that there is no conflict of interests when a scheme invests in securitised debt of an originator and the originator in turn makes investments in that particular scheme.

The resources for and mechanisms of individual risk assessment with the AMC for monitoring investment in securitized debt are as follows:

- Team dedicated to credit analysis. – Currently, the AMC has credit analysts, who are responsible
- for credit research and monitoring, for all exposures including securitised debt. Ratings are monitored for any movement – Based on the cash flow report and analyst view, periodic review of utilization of credit enhancement shall be conducted and ratings shall be monitored accordingly.
- For legal and technical assistance with regard to the documentation of securitised debt instruments, the team can make use of resources within the internal legal team and if required take help of the external legal counsel as well.

Further, the portfolios of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Investments in derivatives: A Scheme may invest up to 50% of its net assets in derivatives for the purpose of hedging and portfolio balancing provided the cumulative gross exposure through debt and derivative positions will not exceed 100% of the net assets of the Scheme. Investments in interest rate swaps shall be done only for the purposes of hedging and shall be in terms of requirements specified by SEBI and / or RBI from time to time. Hedging does not mean maximization of returns but only attempts to reduce systemic or market risk that may be inherent in the investment. The manner in which derivative investments may be utilised and the benefits thereof have been explained in the Scheme Information Document. The various risks associated with investing in derivatives have been explained at paragraph “**Risk associated with investing in derivatives**” above. Any investments in derivatives will be undertaken after considering the risks as set out at paragraph “**Risk associated with investing in derivatives**” above.

The Scheme does not propose to invest in securities of a company having its principal business activity in the airlines and alcohol sectors.

As per the SEBI Regulations, mutual funds are required to disclose (the floors and ceilings within a range of 5%) the intended allocation (in %) in various securities against each sub asset class/credit rating.

The Scheme may invest in various securities/instruments as per the table given below:-

(% of net assets)

Credit Rating Instruments	AAA	A1+	AA (including AA+ and AA-)	A1	A (including A+ and A-)	BBB (including BBB+ and BBB-)	N.A.
CDs	-	-	-	-	-	-	-
CPs	-	-	-	-	-	-	-
NCDs/Bonds	-	-	95%-100%	-	-	-	-
Securitized Debt	-	-	-	-	-	-	-
Government Securities/Treasury Bills/ CBLO/Reverse Repos having collateral as Government securities	-	-	-	-	-	-	-
Cash and Cash equivalents (including units of Liquid Funds as defined under SEBI Regulations and/or fixed deposits)	-	-	-	-	-	-	0%-5%

Notes:

- a) The Fund manager reserves the right to deviate the asset allocation pattern in favour of higher credit rating in the same instrument.
- b) As a result of non-availability of CPs and NCDs (including securitised debt) and considering the risk - reward analysis of the aforesaid instruments, the Scheme may invest in Treasury Bills, CBLOs, Reverse Repo, units of Liquid funds as defined under SEBI Regulations and CDs having highest rating (A1+).
- c) As a result of non-availability of CDs and considering the risk - reward analysis of the aforesaid instrument, the Scheme may invest in CBLOs, Treasury Bills, Reverse Repo and units of Liquid funds as defined under SEBI Regulations.
- d) Exposure to cash and cash equivalent (including units of debt/fixed income schemes of mutual funds registered with SEBI and/or fixed deposits) would be higher post closure of NFO of the Scheme and towards its maturity.
- e) The Schemes may have exposure in unrated securities and derivatives instruments as per the limits specified in this document and as may be permitted under the Regulations and RBI from time to time.
- f) Any deviations from the floor and ceiling of credit ratings specified above for any instrument shall be rebalanced within a period not exceeding 5 days for Schemes with maturity over 30 days up to 3 months, 15 days for Schemes up to 6 months of maturity and 30 days for Schemes beyond 6 months of maturity. The rebalancing period for Schemes with maturity up to 30 days will be NIL.
- g) During the tenure of the Scheme, the above allocation may vary due to instances like (i) coupon inflow; (ii) the instrument is called or bought back by the issuer; (iii) in anticipation of any adverse credit event.
- h) All investments shall be made based on the ratings prevalent at the time of investment. However, in case of a security/ an instrument having dual ratings, the most conservative publicly available rating would be considered.

There would be no variation between the indicative portfolio allocation and the final portfolio, except under the circumstances mentioned points (a),(b), (c), (d), (f) and (g).

Investments in derivatives:

The AMC will comply with all requirements as stipulated in the SEBI circular number Cir/IMD/DF/11/2010 dated August 18, 2010 with respect to investments in derivatives.

A Scheme may invest up to 50% of its net assets in derivatives for the purpose of hedging and portfolio balancing. Hedging does not mean maximization of returns but only attempts to reduce systemic or market risk that may be inherent in the investment. The manner in which derivative investments may be utilised and the benefits thereof have been explained in the Scheme Information Document. The various risks associated with investing in derivatives have been explained at paragraph "Risk associated with investing in derivatives" above. Any investments in derivatives will be undertaken after considering the risks as set out at paragraph "Risk associated with investing in derivatives" above.

e. Illustration:

Impact of expense ratio on the Scheme's returns:

Expense ratio, normally expressed as a percentage of Average Assets under Management, is calculated by dividing the permissible expenses under the Regulations by the average net assets.

To further illustrate the above, for the Scheme under reference, suppose an investor invested Rs. 10,000/- under the Growth Option, the impact of expenses charged will be as under:

Particulars	Regular Plan			Direct Plan		
	Amount	Units	NAV (Rs.)	Amount	Units	NAV (Rs.)
Invested in the NFO (A)	10,000	1,000	10.0000	10,000	1,000	10.0000
Value of above investment after 1 year from the date of allotment (post all applicable expenses) (B)	10,700	1,000	10.7000	10,750	1,000	10.7500
Expenses charged during the year (other than Distribution Expenses) (C)	50			50		
Distribution Expenses charged during the year (D)	50			0		
Value of above investment after 1 year from the date of allotment (after adding back all expenses charged) (E) [E= B+C+D]	10,800	1,000	10.8000	10,800	1,000	10.8000
Returns (%) (post all applicable expenses) (F) [F= (B-A)/A]	7.00%			7.50%		
Returns (%) (without considering any expenses) (G) [G= (E-A)/A]	8.00%			8.00%		

Kindly note the following:

- The purpose of the above illustration is to purely explain the impact of expense ratio charged to the Scheme and should not be construed as indicative returns of the Scheme.
- Calculations are based on assumed NAVs, and actual returns on your investment may be more or less.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan under the Scheme will be lower to the extent of the above mentioned distribution expenses/ commission.
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to consult his or her own financial advisor.

f. Restrictions on redemption of Mutual Funds

The following requirement shall be observed before imposing restriction on redemptions:

Restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:

- Liquidity issues - when market at large becomes illiquid affecting almost all securities rather than any issuer specific security.
- Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.
- Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems.

Restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period.

Any imposition of restriction would require specific approval of Board of AMC and Trustees.
